Mobile Feedback

Mobile Feedback

Introduction

Mobile Feedback makes it easy to get feedback from customers, enhancing your flow of information to act on, as well as providing improved service to your customers.

Aimed at

Service companies with many customers that have a need to contact you when and where actionable things occur, as part of a standard or extended business offering, where it is of great importance that information is detailed and exact enough for quick decision making and follow-up actions.

Features and benefits

- Have your customers report in anomalies and issues when they occur and where they occur
- Get detailed information immediately, avoiding misunderstandings and speeding up dispatching of activities and personnel
- Locate the customer geographically
- Perform analysis of usage patterns
- Get responses immediately via e-mail as well as logged for later retrieval
- Increase competitiveness with added customer value
- Adapt content and function over time, based on your own and customer needs
- Provide long term value and get a quick RoI

Example uses

Use Mobile Feedback to get feedback and reports on e.g.

- Equipment status and possible failure
- Environmental damage
- Accidents
- Violence
- Break-ins
- Thefts

Mobile Feedback

Solution

Customers/users install a branded mobile app for iOS and Android that enable them to write and submit issue reports, get instructions for how to use the app and how to act, find contact information etc.

The same features can also be accessed via a mobile-adapted Web page, looking and working the same as the app.

Forms can contain any number of different fields, and files can be uploaded (e.g. photographs). See Details for more information.

CliqTags (Abiro's mobile CMS) handles all content centrally, so apps need only be published and installed once, and then further content editing is done via your own account from any Web browser, including mobile. Such editing can be outsourced to Abiro as well.

Business model

Up-front payment for custom solution based on your desired feature set and initial content.

Monthly payment for availability and maintenance, optionally paid per year.

Detail functionality, commitment and costs are negotiated on a case by case basis.

Mobile Feedback

Details
