# CLIQTAGS

The cost effective all-in-one solution for your mobile marketing campaigns

Set up your mobile campaigns, inform your targeted audience, and see the results, all via the same tool, where you can do everything on your own (if you want to) in hours, rather than days or weeks.

CliqTags is completely cloud-based, so there's nothing to install or configure locally, and you can access it from anywhere and at any time, including when meeting with your clients.

You just register and are on your way. There's a free limited plan, as well as commercial fully-featured monthly subscriptions.

Create mobile sites with coupons, surveys, news feeds, Facebook likes, maps, redirections, contact cards etc, and enhance the user experience with text, colors, pictures, videos and sound.

Manage access to the content by setting up scheduling or manually activate/deactivate individual pages or whole sites.

Manage multiple sites as easily as multiple pages, create similar sites by copying existing, design and brand your sites without need for knowledge about CSS, HTML and other acronyms.

Provide your customers access to created content via QR codes, SMS, e-mails, digital ads etc.

Follow accesses and survey responses directly in the tool. You can also export such data for further analysis.
